

## Network+ Study Guide: Exam N10-008, 5th Edition

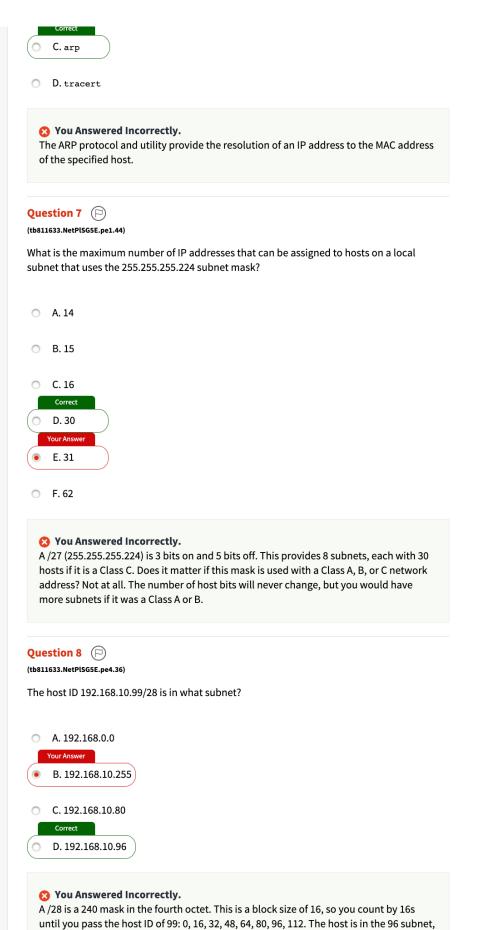

## Question 6

(tb811633.NetPlSG5E.pe5.48)

You have noticed suspicious Internet Protocol (IP) traffic on the local subnet. After successfully pinging the source, what Windows utility should you use to find the associated Media Access Control (MAC) address?

B. nbstat

(tb811633.NetPlSG5E.c06.05)

and because the next subnet is 112, the broadcast address is 111.
